

Travel Report (CAPES/Print/UFMS mission)

IGARSS 2019 (Yokohama/Japan)

Prof. Dr José Marcato Junior attended IGARSS 2019 between July 25/07/2019 and 02/08/2019 held on Yokohama/Japan. IGARSS is an annual symposium, one of the most important in the research field of Remote Sensing and Computer Vision. IGARSS 2019 had about 3,000 participants.

In addition to the Prof. José, two undergraduate (David Di Martini and Yuri Becker) and one graduate student (Henrique Siqueira) in Environmental Technologies (PGTA) attended the symposium. These students received grants from the event.

During the event, Prof. José held meetings with renowned researchers in the field of Computer Vision and Remote Sensing: Prof. Dr Jonathan Li (University of Waterloo/Canada), Dr. XiaoXiang Zhu (DLR and TU Munich/Germany) and Dr. Chang Huang (Northwest University/China).

An effective partnership with the Dr. Li began during the event. Given the research overlaps, we have already collaborated in the development of two scientific articles for high impact journals (ISPRS Journal – IF: 6.942; and IEEE Transactions on Geoscience and Remote Sensing – IF: 5.63).

Dr. Zhu and Dr. Huang showed interest on collaborating on our research project. Details regarding their effective collaboration is under discussion.
